DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on October 10, 2003 has been entered.

The present claims are 1-47.

The applicants' IDS filed on 10/10/03 have been considered.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-47 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 6,372,708. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-14 in Patent '708 discloses a composition comprising suds stabilizer, and wherein a said suds stabilizer comprises units having a cationic charge density from about 0.05 to about 5 units per 100 daltons molecular weight at a pH of from about 4 to about 12 and at least one polymerizable monomeric unit having a chemical structure that is readable in a cationic unit in the present claim 1. The homopolymer (a) in claims 1-14 in Patent '708 is readable in applicants' claimed block polymer in the present claims. The difference between the present claims and claims 1-14 in Patent '708 is that claims 1-14 in patent '708 disclose a liquid detergent composition comprising a deterative surfactant and a liquid detergent composition is using for hand dishwashing. However, a suds stabilizer in the present claim 25 can also be used for cleaning purposes. It would have been obvious to one of ordinary skill in the art to use a suds stabilizer in the claims 1-14 in Patent 6,372,708 and to consider that a composition having a suds stabilizer can have additional components depending on the desired properties of a composition using a said suds stabilizer.
